NAME: TEST PATIENT THETA **AGE/SEX: 65 / M**
REFD. BY: TEST REFERRING DOCTOR **DATE: 15/10/2026**
UHID: TEST-008 **ACCESSION: ACC-MRI-BRAIN-CS-002**

MRI BRAIN WITH CERVICAL SPINE SCREENING

This is a limited screening examination of the cervical spine. Dedicated cervical spine MRI is recommended for detailed evaluation.

CLINICAL HISTORY:

Headache, dizziness, and neck stiffness

TECHNIQUE:

Multiplanar, multisequence MRI of the brain was performed without intravenous contrast. Limited screening sequences of the cervical spine were also obtained.

FINDINGS:

BRAIN: There are mild chronic small-vessel ischemic changes involving the deep white matter bilaterally. No focal mass lesion, hemorrhage, or restricted diffusion. Ventricles are normal in size and configuration. Midline structures are centered.

CERVICAL SPINE SCREENING: Limited evaluation demonstrates multilevel degenerative changes. At C5-C6, there is a disc osteophyte complex causing mild central canal narrowing on the screening sequences. The cervical cord appears normal in caliber within the limitations of the screening examination.

IMPRESSION:

1. **Mild chronic small-vessel ischemic changes of the brain.**
2. **Limited cervical spine screening: multilevel degenerative changes with C5-C6 disc osteophyte complex causing mild central canal narrowing.**

RECOMMENDATION:

Dedicated cervical spine MRI recommended for detailed evaluation if clinically indicated.
